Education

Dalhousie University
Bachelor of Computer Science

Halifax, NS
Sept 2022-May 2026

Skills

Programming Languages: Python, Java, C#, JavaScript, TypeScript, SQL, HTML, CSS, C++, C

Software Development: ASP.NET Core, Flask, Node.js, REST APIs, API Integration, Backend Development, Authentication, Session Management, MVC Architecture

Frontend Technologies: React, React Native, Firebase, Responsive UI Design

Databases & Data: SQL Server, PostgreSQL, MySQL, MongoDB, SQLAlchemy, Database Design, Data Modeling

Cloud & Tools: AWS (EC2, S3, RDS, VPC), Docker, Git, GitHub, Azure DevOps, Linux, Bash

Developer Practices: Agile/Scrum, Unit Testing, Integration Testing, Debugging, Code Reviews, Technical Documentation, Software Testing

Additional Knowledge: Machine Learning Fundamentals, AI/LLM Concepts, JSON Processing, Automation Workflows

Experience

Junior Software Developer Intern: Sobeys Headquarters

May 2025 – Aug 2025

Stellarton, Nova Scotia

- Developed internal automation tools including a registry-to-SQL application and data-fetching systems, reducing manual configuration effort by 30%
- Enhanced authentication, authorization, and session management functionality in enterprise web applications, improving security and reducing login-related issues by 25%
- Collaborated on deployment and integration workflows, reducing barcode-related issue resolution time by 20% through debugging and issue resolution
- Participated in Agile development, code reviews, and technical collaboration activities, contributing to a 10% improvement in overall team delivery efficiency

May 2024 – Aug 2024

Software Developer Intern: Sobeys Headquarters

Stellarton, Nova Scotia

- Built and maintained backend systems and databases supporting store operations across Canada using scalable data workflows
- Resolved deployment and configuration issues, improving ticket completion time by 13% through efficient troubleshooting
- Implemented validation and security measures to improve reliability, maintainability, and operational stability across systems
- Collaborated with teams to support deployments, backend maintenance, and operational improvements

Projects

(More on GitHub and
Personal Website)

Home Finance Tracker | ASP.NET Core, C#, SQL Server, JavaScript, HTML, CSS

- Developed a full-stack finance management application with authentication and session management
- Designed and implemented RESTful APIs and backend workflows for handling financial transactions and user-specific operations
- Built scalable database structures, validation logic, and secure file upload functionality
- Participated in testing, debugging, and iterative feature improvements to improve maintainability and application performance

Medibot | Python, Flask, SQLAlchemy, JSON, Pandas

- Built backend services for a real-time medical prioritization system using Python and Flask
- Designed asynchronous communication and structured data-processing workflows for handling live data streams
- Implemented database handling, validation logic, and backend optimization using SQLAlchemy ORM
- Participated in debugging, testing, and improving backend system reliability and maintainability

Weather Dashboard Web Application | AWS, REST APIs, JavaScript

- Developed and deployed a cloud-based weather application integrating real-time API data from multiple sources
- Configured AWS services including EC2, S3, RDS, and VPC for hosting, networking, and infrastructure deployment
- Implemented backend data-processing workflows and dynamic frontend updates for reliable application functionality
- Troubleshoot deployment, networking, and integration issues to improve cloud reliability and operational stability
